

What is claimed is:-

1. A telecommunication apparatus for requesting the download of
respective pages of received information from a remote source comprising:
 - 5 means for receiving respective pages of information including encoded
information identifying respective links to other pages;
 - a display for displaying the received page;
 - 10 a fixed location input key, and
 - a processor for consistently associating the input key with the encoded
information identifying a respective linked page during a display period such
15 that actuation of the input key during the display period requests the respective
linked page for download from the remote source.
2. A telecommunication apparatus according to claim 1 comprising
respective fixed location input keys and wherein the processor associates each
20 input key with the encoded information identifying a respective linked page.
3. A telecommunication apparatus according to claim 1 wherein the display
period is the duration of the display of the received page.
- 25 4. A telecommunication apparatus as claimed in claims 1 wherein the input
key is a dedicated key.
5. A telecommunication apparatus as claimed in claim 4 wherein the
dedicated key is one of a group of alphanumeric keys provided for dialing.
- 30 6. A telecommunication apparatus as claimed claim 1 wherein the input key
is a touch-sensitive area of the display.

7. A telecommunication apparatus as claimed in claim 1 wherein a caption indicative of the linked page is provided in close proximity to the input key.

8. A telecommunication apparatus as claimed in claim 7 wherein the caption is provided immediately above the input key.

9. A telecommunication apparatus as claimed in claim 1 wherein the remote source is a computer capable of connection to the World Wide Web (WWW).

10. A telecommunication apparatus as claimed in claim 1 wherein the apparatus comprises a markup language decoder.

11. A telecommunication apparatus as claimed in claim 1 wherein the association between the user-operable input means and the link is achieved by means of a particular tag in the page of information.

12. A telecommunication apparatus as claimed in claim 1 wherein the apparatus is arranged to be mountable in a vehicle.

13. A telecommunication apparatus as claimed in claim 1 wherein the apparatus is a portable wireless telecommunication apparatus.

14. A method of requesting the download of respective pages of received information from a remote source comprising

receiving respective pages of information including encoded information

identifying respective linked other pages, the encoded information including a functional element for consistently associating operation of an identified input device with a request for download of the linked page, and a visual element for labelling the operation;

separating the labelling and functional elements of the encoded information;

displaying the labelling information at a predefined position and

5

defining the function of the identified input device using the functional element of the encoded information such that on operation of the input device the respective linked page is requested for download.

- 10 15. A telecommunication apparatus as hereinbefore described with particular reference to one or more of the figures, either alone or in combination.
